

WALL CAP FORMS

WALL CAP FORMS ARE USED TO POUR CONCRETE CAPS ON BLOCK WALLS, GLASS BLOCK WALLS, PLANTERS, AND BENCHES.

Wall cap forms are lightweight, foam forms that are held in place with reusable Spring Clamps. These forms are available in several classic profiles and provide a "cast-in-place" alternative to many precast situations.

WALL CAP FORMS

Wall Cap Forms are a foam profile forming system that features a unique ledge designed to establish a consistent and firm elevation. These forms are held in place with reusable Spring Clamps that are positioned approximately 18 inches on center and are flexible enough to attach the forms to walls from 8 to 10 inches thick.

The Right Tools Make All The Difference

FOAM PROFILE EDGING TOOL

Foam Profile Edging Tool's are made of foam and match the profile's exactly. Remove the forms while the concrete is still green but strong enough to support its own weight, mist with water and use tool to apply a clean finish without the chatter marks (imperfections caused by the tool riding over stones).
